

A short reflection paragraph (4–6 sentences) answering:

- What design principle did you find most useful?

I found Proximity principle the most useful. In order to make a design or text digestible to the audience, there must be appropriate space between the elements. Moreover, putting extra space between elements that have no relation to each other helps the audience understand what they're looking at, similar to putting related elements closer to each other. In a way, Proximity acts as a guide, especially since humans are typically visual learners. Therefore, when I create designs such as the presentation of my laboratory work #1, I like to use proximity appropriately.

- What part of Canva was easiest/hardest to use?

Personally, the easiest tool to use in Canva would be the Elements Feature found on the left side inside any design template. Canva is an online graphic design tool where elements would definitely be something needed by the users, and the Elements Feature make it easy to find any needed element with just a few clicks. Navigating the Elements Feature is beginner-friendly -- when a user opens a design template, they are met with a tool tab found on the left side comprising Design, Elements, Text, and etc. A user can just click on the Elements and search any element they need, then after finding their desirable element, they may click on it and it will appear on their design, then they may utilize it however they need.

- What did you learn about visual communication?

A design can be most visually communicative if it is digestible. By digestible, I mean that the elements inside the design primarily include the principles of Contrast, Repetition, Alignment, and Proximity. Although, it is recommended to utilize other principles as well such as White/Negative Space, Visual Hierarchy, and more. Visual Communication can be powerful when done with consistency, clarity, and variety.
